NIKOLOZ SHEKILADZE

FULL STACK ENGINEER · .NET · ANGULAR · REACT · REACT NATIVE

DETAILS

LOCATION
Tbilisi, Georgia
Remote · Hybrid

PHONE
+995 555 778 300

EMAIL
nikashekiladze@gmail.com

PORTFOLIO
soapydev.com

SKILLS

BACKEND
C#, .NET 8, ASP.NET Core, Node.js, REST APIs, microservices, background workers

FRONTEND
Angular (incl. Universal/SSR), React, Next.js, Vite, TypeScript, JavaScript, SEO

MOBILE
React Native, Expo (iOS & Android), push notifications, deep linking

DATA
MongoDB (Atlas Search), SQL, PostgreSQL, SQL Server, Prisma, Redis

AI
OpenAI & Claude APIs, LLM agents, YOLO computer vision, AI-assisted development

DEVOPS
Docker, GitHub Actions CI/CD, Linux servers, Git

LANGUAGES

Georgian — native
English — fluent
Russian — fluent

EDUCATION

BSc Computer Science
Georgian Technical University
2022 — present

INTERESTS

Game development (Unity, Bevy)
Dog training
Piano & guitar

PROFILE

Full stack engineer with nearly 5 years of building production web and mobile products with C#/.NET, Angular, React and React Native. I own features end to end, from MongoDB/SQL data models and .NET services to Angular dashboards and Expo apps on iOS and Android, and I work directly with product owners and clients. I also run 404 Friends, where I build and ship AI-powered products to production (LLM agents, computer vision), and I use AI coding tools daily to deliver faster.

EXPERIENCE

Software Developer (C# / Angular), Broccoli IT

Tbilisi

Feb 2022 — Present

- Build business logic in C#/.NET microservices with Angular front ends for international clients.
- Develop a Dutch B2B/B2C car auction platform for dealers (real-time and blind bidding, detailed listings, advanced search) across ASP.NET, Blazor and Angular apps.
- Built a Google Analytics 4 dashboard for Voya, a hotel guest-magazine platform (.NET API, Angular admin, Next.js guest site): per-hotel reports, traffic filtering and rate-limit-safe GA4 Data API integration.
- Refactored services and tuned MongoDB queries to speed up slow screens.
- Work directly with project owners to fix cross-service issues and keep data consistent; review C# and Angular code against SOLID principles and team conventions.

Founder & Lead Engineer, 404 Friends

Tbilisi

2026 — Present

My own studio: products and client work from idea to production.

- **ShopDesk** (shopdesk.ge): multi-tenant SaaS that builds online stores for small businesses through an AI onboarding chat. Next.js 15, Prisma, PostgreSQL (database per tenant), background workers, Docker, GitHub Actions deploys to production, Flitt card payments.
- **RMinder**: Expo/React Native app with a .NET 8 + MongoDB backend. Built its creator platform: feeds with ranking, comments, follows, moderation queue, push notifications and video processing (ffmpeg, Redis).
- **TableSight**: restaurant service monitoring on existing CCTV. A Python + YOLO edge service sends events, never video; a Next.js dashboard turns them into staff alerts.

Mobile Developer (React Native), Digital Systems

Tbilisi

Apr 2024 — Apr 2025

- Built and maintained Bono, a loyalty app that gathers points from different programs in one place (Expo, React Native, C# backend).
- Implemented push notifications, deep linking and third-party API integrations.
- Kept the app fast and consistent on iOS and Android, turned designs into pixel-accurate screens and added automated tests.

SELECTED PROJECTS

GetBot (2022 — 2023) — AI companion Chrome extension built on the OpenAI API and Chrome extension APIs.

HR Soft (2021 — 2023) — HR platform that helps teams track and improve quality of work.

Forest Friend (2021) — Volunteer web app for planting trees in Georgia, online or in person.

Developer tooling (2026) — SoapIDE, a personal Electron IDE with a task board and git-worktree workflow; GNOME Shell and Firefox extensions.
